

HEM-O-PURE

The next generation in water purification technology for dialysis
We closed the hygienic loop of the purified water all the way to the dialysis machines and innovated to keep the excess returned water also in a closed loop all the way back to be reprocessed at the Reverse Osmosis

That means the break tank was eliminated.
The water hygienic loop is maintained all the way !

Gone the contamination trap with dusts, insects, vermins, bacteria, viruses and all sorts of contaminants

The advent of a new proprietary water saving technology has made this improvement possible

Hem-O-Pure is the most advanced water purification system available on the haemodialysis market today
